A GSE76092, independent 3 versus 3
−log10 BH FDR
Log2 fold change: untreated resistant − parental
CXCL8
DUSP1
CXCL1
B Top 10 pathways by FDR (red: up, blue: down)
Response to metal ions
Metallothioneins bind metals
Aflatoxin activation and detoxification
NFE2L2 regulating anti-oxidant/detoxification enzymes
Resolution of AP sites via the multiple-nucleotide patch replacement pathway
Formation of apoptosome
Cytochrome c-mediated apoptotic response
Apoptotic factor-mediated response
IRS-mediated signalling
Signaling by FGFR in disease
−log10 CAMERA pathway FDR
